Professional Summary

Frontend Developer and UI Engineer with 1+ years of experience creating responsive, high-performance web applications. Expert in React ecosystem with strong focus on user experience and accessibility. Specialized in converting complex requirements into intuitive, scalable frontend solutions across fintech, health-tech, and sports domains.

Technical Expertise

Core Frontend: React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3

Styling & UI: Tailwind CSS, CSS Modules, Responsive Design, Mobile-First Development

State Management: React Hooks, Context API, Redux (Basic)

Tools & Build: Vite, Webpack, Git, GitHub, Figma, Vercel, Firebase

APIs & Integration: RESTful APIs, Third-party Integrations

Performance: SEO Optimization, Code Splitting, Lighthouse Optimization, Web Vitals

UX/UI: Wireframing, Prototyping, Accessibility (WCAG), User Testing

Professional Experience

Founding Frontend Developer | Backline Sports Analytics (Remote)

April 2024 - Present

- **Single-handedly architected and built complete MVP from ground up**, including main platform, integrated blog system, and community Reddit-style forum
- Developed interactive data visualization dashboards using React and reCharts.js, FOR sports analysts.
- Built responsive UI components with smooth animations for handling complex sports analytics data points

- Led UX design implementation and established comprehensive design system, reducing team development time by 30%
- Delivered full-stack solution encompassing user authentication, content management, and community engagement features

Lead UI/UX Developer | Africa Access Water (Remote)

August 2024 - Present

- Spearheading complete website rebuild and redesign initiative to modernize user experience and improve accessibility.
- Designing and developing responsive page layouts and interactive components for the website.
- Collaborating with stakeholders to create user-centered design solutions for critical water infrastructure information
- Implementing modern frontend technologies to enhance site performance and user engagement

Freelance Frontend Developer (Remote)

April 2024 - Present

- Delivered 8+ responsive web applications across diverse industries with 100% client satisfaction
- Specialized in conversion-focused UI/UX resulting in average 25% increase in user engagement
- Built reusable component libraries and design systems for scalable frontend architectures
- Integrated complex third-party services including payment gateways, analytics, and AI APIs

Full-Stack Developer (Volunteer) | Saayam for All (Remote)

August 2024 - Present

- Enhanced nonprofit platform UI with focus on accessibility
- Implemented responsive React components improving cross-platform experience by **45%**
- Led internationalization (i18n) implementation supporting 10 languages with dynamic content loading

Featured Frontend Projects

FirstAid Emergency Health Platform *(Personal MVP)*

Tech Stack: Next.js, TypeScript, Tailwind CSS, OpenAI API, Geolocation API, Database Integration

- **Challenge:** Design life-saving emergency response interface optimized for high-stress, time-critical situations
- **Solution:** Mobile-first architecture with intuitive UX, large touch targets, and simplified navigation for emergency scenarios
- **Key Features:**
 - **AI-powered emergency assistance** with real-time chat integration and intelligent response suggestions
 - **Multilingual support** enabling global accessibility across diverse user populations
 - **Geolocation services** for location-aware emergency guidance and nearest facility detection
 - **Medical database** with searchable emergency procedures and treatments
 - **Responsive design** delivering consistent experience across all screen sizes
- **Technical Excellence:** Full-stack development from database design to AI integration, showcasing end-to-end product development capabilities
- **Live Demo:** <https://first-aid-rust.vercel.app/>

Interactive Sports Analytics Dashboard *(Full-Stack Platform)*

Tech Stack: React, reCharts.js, TypeScript, WebSocket, Database Integration

- **Challenge:** Build comprehensive sports analytics platform with real-time data visualization for 10,000+ data points
- **Solution:** Full-stack development with efficient rendering, virtualization, and optimized chart libraries
- **Key Features Built:**
 - **User profile system** with authentication and personalized dashboards
 - **Database integration** for persistent data storage and user management
 - **Reddit-style community forum** for user discussions and sports analysis sharing
 - **Interactive data visualization** using reCharts for comprehensive sports analytics
 - **Clean, intuitive UI/UX design** ensuring seamless user experience
 - **Integrated blog system** for sports content and analysis articles
- **Results:** 40% improvement in query response times with smooth real-time updates
- **Performance:** 60fps animations, efficient memory usage, scalable architecture supporting multiple platform features

UI/UX & Design Skills

Design Tools: Figma, Sketch (Basic)

Design Systems: Component libraries, Style guides, Design tokens

User Research: User interviews, A/B testing, Usability testing

Accessibility: WCAG 2.1 AA compliance, Screen reader optimization, Keyboard navigation

Responsive Design: Mobile-first approach, Progressive enhancement, Cross-browser compatibility

Education & Continuous Learning

Doctor of Medicine (MBBS) | Babcock University, Nigeria | 2016 - 2023

Unique background providing user empathy and attention to detail

Self-Directed Frontend Specialization | March 2024 - Present

- Advanced React patterns and performance optimization
 - Modern CSS techniques and responsive design
 - Accessibility and inclusive design principles
 - Frontend architecture and scalability
-

Open Source & Community

- **GitHub:** 10+ public repositories with frontend projects and components.
 - **Mentoring:** Volunteer frontend development mentor for emerging developers.
 - **Contribution:** Contribution to Open-Source Projects via Volunteer work in organizations such as Saayam for all and OpenGov Africa.
-

Key Metrics & Achievements

- **Performance:** Consistent 95+ Lighthouse scores across all projects
- **User Experience:** 60% reduction in user navigation complexity
- **Efficiency:** 40% improvement in application load times
- **Accessibility:** 100% WCAG AA compliance on all delivered projects
- **Cross-Platform:** Responsive design supporting 95%+ device compatibility
